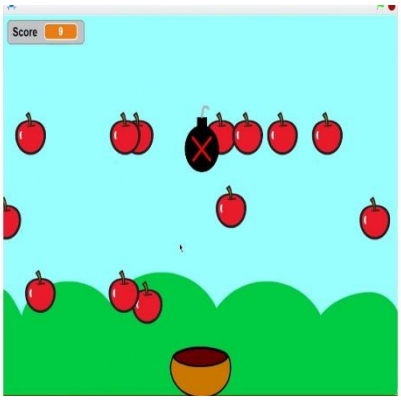
**Lahore Pakistan**
**Vision of 1st Year**

## Business application

I want to develop a buissness application about the management system of a poultry farm. In this program it would be easy for poultry farm owners to manage their data.

## 2D Game



I want to develop a drop and catch game. With the help of this game , one can spend his quality time in playing a game which will be very amazing. Actually I am inspired by google chrome as whenever we go to chrome and search anything while we are offline , a game appears in front of us , and we start playing that game , and my vision is to make such a game for meta ( facebook , insta, etc).
